INTRODUCTION

HR Analytics plays a significant role in helping organizations understand workforce patterns, employee demographics, hiring trends, and workforce diversity. By analyzing HR data, organizations can improve decision-making related to recruitment, employee engagement, and workforce management.

This project focuses on analyzing employee workforce data using Power BI dashboards and visualizations. The dashboard helps in understanding employee distribution across departments, states, gender, race, and hiring trends.

OBJECTIVE

The objective of this project is to analyze HR employee data and derive meaningful insights related to workforce distribution, employee diversity, remote working percentage, and hiring trends using Power BI.

DATASET INFORMATION

The HR Analytics dataset contains 22,214 employee records and 13 columns. The dataset includes employee-related information such as employee ID, age, gender, race, department, job title, location, hire date, city, and state.

TOOLS AND TECHNOLOGIES USED

- Power BI
- MySQL Database
- DAX Functions
- Data Cleaning & Transformation
- Data Visualization Techniques

KPI ANALYSIS

The dashboard includes the following KPI indicators:

- **Total Employees:** Approximately 22K employees are currently present in the organization.
- **Remote Employees Percentage:** Around 24.75% employees are working remotely.
- **Headquarters Employees Percentage:** Approximately 75.25% employees are working from headquarters locations.
- **Average Employee Age:** The average employee age is 38.43 years.

DASHBOARD ANALYSIS

The dashboard provides various visualizations to analyze employee workforce distribution effectively.

- The hiring trend chart shows employee hiring patterns over multiple years.
- The gender distribution chart represents the percentage of male and female employees in the organization.
- The department-wise chart displays employee allocation across different departments.
- The state-wise chart shows workforce distribution across multiple states.
- The race-wise chart highlights workforce diversity within the organization.

KEY INSIGHTS

- The majority of employees are working from headquarters locations.
- The organization maintains a balanced workforce with an average employee age of around 38 years.
- Hiring trends remained stable across multiple years.
- Employee distribution varies significantly across departments and states.
- Workforce diversity is represented through multiple race categories and gender distribution.

SUGGESTIONS

- The organization can improve remote work flexibility for employees.
- HR teams can focus on maintaining balanced workforce diversity.
- Employee engagement programs can help improve workforce productivity and retention.
- Recruitment strategies can be optimized based on department-wise workforce distribution.

CONCLUSION

The HR Analytics Dashboard successfully analyzed employee workforce data and generated meaningful insights using Power BI visualizations. The project demonstrates how HR data analytics can support better decision-making related to workforce management, hiring analysis, employee diversity, and organizational planning.
